

Guidelines for Door/Window Replacement May 2022

Both installed door and windows are to be permitted and to code.

DOOR

The door matches our existing door; only the insert differs (picture below) and

1. The door handle and plate will be a metal color (not white).
2. The white frame around the glass insert will be painted light grey to match the door.
3. The door color will match the current grey door color.
4. Colors: Benjamin Moore dark grey PM8; trim light grey 2126-60 less 50%.

WINDOWS

The windows (pictured below) will match our existing window design:

- will have white frames and 4 quadrants,
- will be hurricane proof (i.e. impact glass, etc), and
- will be built and installed in total and complete compliance with the State of Florida and the City of Deerfield Beach building code requirements associated with hurricane and high wind window frames and impact glass.

A second option for the front windows (sliders) is pictured below:

- will have white frames and clear glass,
- will be hurricane proof (i.e. impact glass, etc), and
- will be built and installed in total and complete compliance with the State of Florida and the City of Deerfield Beach building code requirements associated with hurricane and high wind window frames and impact glass.
